

Nguyen Tan Huu Danh - Backend Developer

0901219753 · nguyentanhitudanh@gmail.com · <https://github.com/Huu-Danh> · Go Vap , Ho Chi Minh City

SUMMARY

Backend Developer focused on building scalable and high-performance web applications. Proficient in .NET 8.0 and Python (FastAPI), with knowledge of RESTful API design, OOP, SOLID principles, SQL database management, and CI/CD deployment. Highly motivated to learn new technologies and eager to contribute to real-world projects to enhance skills and create impactful products.

TECHNICAL SKILLS

Backend: C# (net 8.0, net framework), python (FastAPI), C/C++, Java, Nodejs (ExpressJs)

Frontend: Hmtl/Css, JavaScript, TypeScript, ReactJS, PHP, Tailwind, Bootstrap

Data base: SQL server, MySQL, MongoDB, Neo4j

Tool: Github, Postman, Canva, Figma, AI, Docker

WORK EXPERIENCE

AI Chatbot for Travel Customer Support - VIETRAVEL

Team size: 5 members

7/2024 - 12/2024

Role: Backend Developer

Description: Contributed to the development of an intelligent AI-powered chatbot system in the tourism sector, designed to assist customers in selecting suitable tours and automating the booking process. The solution improved customer experience while reducing the workload for the support team.

Technologies: Python, FastAPI, Qdrant, OpenAI GPT-4o, Cohere Rerank, MongoDB, Chatwoot (opensource)

Responsibilities:

- Developed and integrated RESTful APIs for the chatbot system using FastAPI.
- Applied OpenAI GPT-4o to generate natural and accurate conversational responses.
- Combined Cohere Rerank with Qdrant vector search to optimize answer accuracy.
- Managed vector data in Qdrant to support advanced semantic search.
- Utilized Chatwoot (opensource) to integrate chatbot APIs and manage multi-channel customer interactions.
- Stored and processed conversation history in MongoDB to enable personalized user experiences.
- Contributed to scalable API design, ensuring smooth integration with customer support workflows.

Key Achievements:

- Successfully deployed an AI chatbot for intelligent tour recommendations and automated booking, significantly reducing consultant workload.
- Enhanced response accuracy by combining Cohere Rerank with Qdrant similarity search.
- Improved customer engagement with accurate responses and personalized interactions based on conversation history.
- Successfully integrated Chatwoot (opensource) for multi-channel management, streamlining interactions between chatbot and human agents.
- Ensured stable performance and scalability when deployed across multiple customer support channels.

Team size: 2 members

Role: Backend Developer

Description: Responsible for developing and deploying the entire e-commerce backend system on .NET 8.0, enabling retail phone stores to manage products, orders, inventory, customers, and real-time business reports.

Technologies: C#, .NET (Web API with Controllers, Entity Framework, LINQ, Middleware, JWT Authentication & Authorization, Background Services), SQL Server, GitHub Actions (CI/CD), ASP.NET MVC

Responsibilities:

- Designed and optimized SQL Server database schema to ensure data integrity and performance.
- Developed backend modules (products, customers, orders, inventory, payment, revenue reporting) with .NET 8.0 Web API.
- Built RESTful APIs with Controllers & Middleware for seamless integration with the ASP.NET MVC frontend.
- Utilized Entity Framework & LINQ for efficient data management and querying.
- Implemented JWT Authentication & Role-based Authorization for secure access control.
- Developed Background Services for tasks such as inventory synchronization and customer notifications.
- Configured CI/CD pipelines with GitHub Actions to automate build, test, and deployment.
- Optimized business logic to enhance scalability and system stability.

Key Achievements:

- Delivered a robust e-commerce backend system that automated sales management and reduced manual workload.
- Provided real-time sales and inventory dashboards, enabling store owners to make timely business decisions.
- Enhanced system security and stability with JWT-based authentication & authorization.
- Accelerated release cycles by implementing CI/CD pipelines with GitHub Actions, reducing deployment time and manual errors.
- Built a scalable backend foundation ready for advanced features such as loyalty programs, multi-branch management, and online payments.

HONORS & AWARDS

Efficient algorithm for c/c++ programming **06/2022**

Competition to find talent and innovative products in Information Technology in the digital era

Second prize **04/2023**

Emergent products and topics in information technology field

Won consolation prize **06/2023**

Young programmer competition: Find the best and brightest

Explaining three faculty-level scientific research competitions **04/2025**

Applying machine learning to build AI Chatbot to support customer consultation in purchasing recycled scrap

EDUCATION

Major: Software technology

Studying: Ho Chi Minh City University of Industry and Trade (HUIT) 2021-2025

GPA: 3.43

SOFT SKILLS

- Adaptability
- Self-study
- Critical thinking
- Leadership
- Problem solving
